

## Rolling in the Sea

Beauty is something that can be found everywhere. Today we'll be exploring the beauty and wonders of the deep sea. Create a sea filled with creatures along with your very own ship! You'll be using many different materials and techniques to show off your mystical sea.

---

**Inspiration: Will Kwan's *Terra Economicus* exhibition  
and the theme of water  
Medium: Mixed Media**

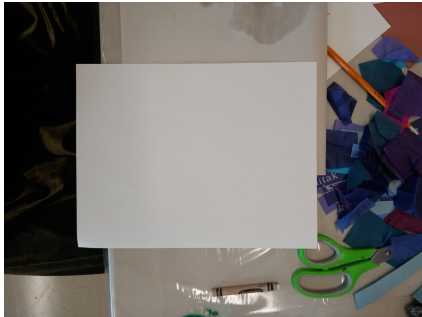

Rolling in the Sea, Example by the RMG, Mixed Media

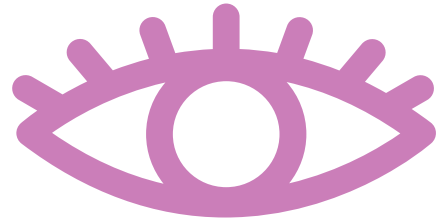

The materials you will need are:

- White Cardstock
- Different colours of construction paper.
- Thin strips of blue paper
- Squares of dark tissue paper or bleeding tissue paper
- Crayola washable markers
- A white Crayon
- White glue
- Spray Bottle filled with water
- Scissors

## STEP 2

Grab some scissors, a spray bottle, and tissue paper. Cut your tissue paper into squares. Spray a small corner of the page with the water and quickly place a few pieces of tissue paper or top of it. Continue spraying the cardstock and placing the tiles of tissue paper until the entire page is covered in tissue paper.

For this project we will show you two different techniques as a base for this project, try both and pick your favourite!

## STEP 1

There are 2 fun ways you can create this beautiful work of art! The first way is to start off by pulling out your white crayon, and card stock. Draw a bunch of lines on the page in different shapes and sizes.

### STEP 3

Once the page is covered, spray the entire page one more time with the water to make sure the tissue paper is wet. Place it aside to dry.

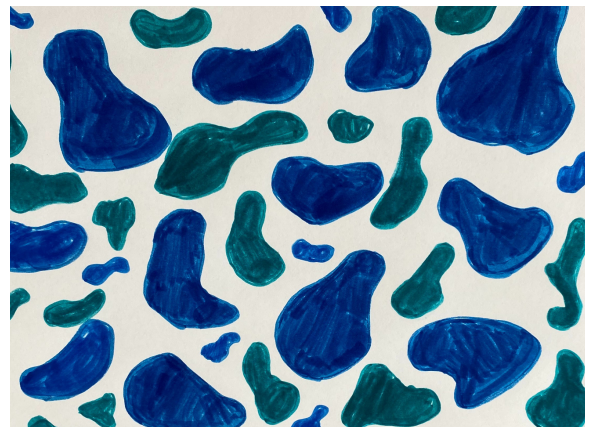

OR

### STEP 4

Grab another piece of cardstock, and blues, greens and/or purples Crayola washable markers will work! Colour in a large variety of round shapes over the entire page. Make sure to leave some white space as this will be important on the next step!

### STEP 5

Take your spray bottle again and spray the whole page. You'll notice that the marker starts spreading colour around! You can even lift the paper up to spread the colour around more. After you are done, place it aside to dry.

## STEP 6

While you wait, use your other pieces of construction paper and create a boat! You can also create some fish to add to your scene. Cut some small strips of card stock, this will act as an anchor to keep your boat and/or fish standing up.

## STEP 7

After your pieces are done drying, go back to the tissue paper covered cardstock piece and peel off the tissue. You'll notice it has left a beautiful stain of colours.

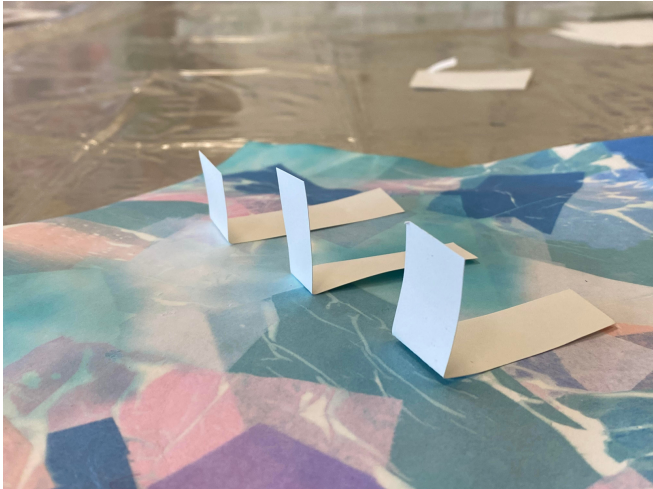

## STEP 8

Using the strips of blue paper, add 3-4 small dots of glue, one on each end and one in the middle. Place the strip of paper onto your card stock and make little hills or waves. You're going to want one wave between each dot of glue.

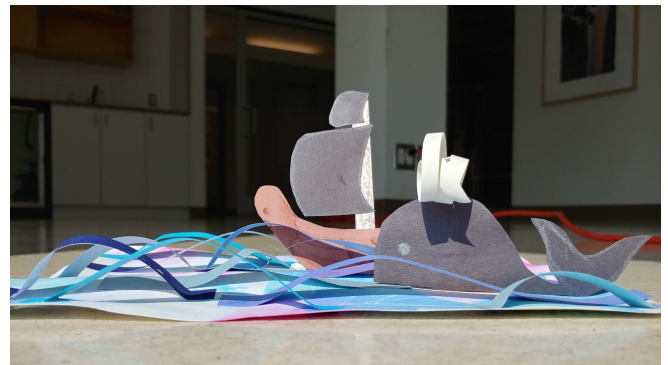

## STEP 9

Once you're done that go back to the boat and/or fish that you made and glue them down. For this step, take the small strips of card stock you cut and bend them. You are going to glue one half onto your boat/fish and the other part on to your base.

## STEP 10

Now you are done! Take pictures and tag your wonderful creations with #thermgFromHome so we can see and share!
